SUMMARY

Senior backend engineer with 10+ years of experience building scalable, high-load systems in fintech, healthcare, and real-time platforms. Expert in Go and TypeScript, focused on distributed systems and low-latency processing.

KEY SKILLS

Languages: Go, TypeScript, Node.js

Databases: PostgreSQL, MongoDB, Redis

Messaging: RabbitMQ, AWS SQS

Infrastructure: Kubernetes, Docker, AWS

Monitoring: Prometheus, Grafana, Loki

AI Agents: Codex, Claude Code

English: C1

EXPERIENCE

Virtuoso Hub – Senior Software Engineer (Remote, UK)

Jul 2025 – Feb 2026

AI communications platform focused on real-time voice/video workflows

- Built LiveKit-based agents for real-time audio/video processing on top of WebRTC infrastructure
- Implemented low-latency STT → LLM → TTS pipelines (OpenAI API)
- Designed and deployed recording pipeline (Go, GStreamer) converting WebRTC streams to HLS
- Owned and developed backend services in Go (MongoDB) for low-latency real-time AI pipelines
- Operated Kubernetes infrastructure ensuring reliability of real-time media pipelines

Haqqex – Senior Software Engineer (Remote, UAE)

Feb 2023 – Jul 2025

A centralized crypto exchange with a focus on halal trading principles

- Led architecture and development of a high-load trading engine using TypeScript (NestJS)
- Scaled order processing throughput 10× by redesigning architecture and partitioning trading data
- Integrated with **KuCoin and OKX Broker APIs**, managing external liquidity for real-time trade execution
- Designed WebSocket pipelines for real-time market data (200+ trading pairs)
- Mentored junior developers, conducted interviews, and improved onboarding
- Scaled system to support **1M+ registered users** and handle high-load traffic spikes
- Contributed to architecture of futures trading system

Medesk – Senior Software Engineer (Hybrid, Russia)

Apr 2017 – Feb 2023

SaaS for clinics across Russia, UK, and Latin America

- Scaled client base from **60 to 3000+ clinics** over 6 years
- Migrated legacy C# billing systems to Go microservices, improving maintainability and reducing setup time
- Built **integrations with lab APIs** (FTP/XML) for 8+ laboratories; automated lab orders and result delivery to millions of patients
- Integrated with **Stripe, CIS and LATAM payment providers**, enabling multi-market payments
- Designed and built internal warehouse management system
- Developed a full-stack **business analytics module** with custom filters and aggregation; helped surpass the 1000-client milestone
- Migrated data from **Neo4j/Elasticsearch to PostgreSQL**, cutting infrastructure costs by \$10k+ per month
- Enabled telemedicine services during COVID using an open-source WebRTC solution

Newmax Technologies – Software Engineer (On-site, Uzbekistan)

Sep 2015 – Mar 2017

Built backend for **MyTaxi**, a local Uber-like service

- Refactored and stabilized a critical Go microservice for real-time ride dispatching, eliminating frequent crashes
- Improved matching algorithm: reduced client wait time from 5 mins to 30 secs by enabling parallel request handling
- Rewrote legacy Node.js driver API to modern asynchronous architecture

EDUCATION

Tashkent University of Information Technologies — Bachelor of Computer Software Engineering (2012–2016)
