

Andrew Nee, Senior Software Engineer (Go, Distributed Systems, AI)

📍 Tashkent ✉ ndrewnee@gmail.com 📞 +998917710028 📧 ndrewnee 🔗 LinkedIn 🐙 GitHub

SUMMARY

- Senior Software Engineer with 10+ years of experience building high-load, distributed backend systems in Go and TypeScript.
- Architected a crypto trading engine for 1M+ users, scaling order throughput 10x; designed and built low-latency real-time AI pipelines (STT→LLM→TTS), integrating external AI services.
- Specialized in migrating complex monoliths to Go microservices, cutting infrastructure costs by over \$120k/year in a previous role.
- Core domains: Fintech (crypto trading), AI Communications (real-time media), and Healthcare SaaS.

SKILLS

- Languages:** Go, TypeScript
- Architecture:** Distributed Systems, Microservices
- Databases:** PostgreSQL, MongoDB, Redis
- Messaging:** RabbitMQ
- DevOps:** Kubernetes, Docker, AWS
- Observability:** Prometheus, Grafana, Loki
- AI:** Real-time pipelines (STT→LLM→TTS), OpenAI APIs

EXPERIENCE

- Senior Software Engineer**

Virtuoso Hub - AI communications platform

 - Architected and built a low-latency real-time AI pipeline (STT→LLM→TTS) in Go, integrating OpenAI APIs, taking the platform's flagship AI agent from concept to production.
 - Owned the end-to-end development of low-latency Go microservices for AI agent interactions, consistently achieving sub-500ms processing times.
 - Engineered a Go and GStreamer-based recording service to transcode WebRTC streams to HLS, launching a critical VOD playback feature for users.
 - Ensured 99.9% uptime for real-time media services during the platform's launch by managing and optimizing Kubernetes deployments and monitoring.

Jul 2025 - Present

Senior Software Engineer

Feb 2023 - Jul 2025

Haqqex - Centralized crypto exchange

- Architected and led the development of a high-load trading engine (TypeScript, NestJS), scaling order processing 10x by redesigning the core matching logic and implementing data partitioning.
- Engineered the primary liquidity bridge by integrating with KuCoin and OKX broker APIs, enabling real-time trade execution across the platform.
- Delivered real-time market data for 200+ trading pairs to 1M+ users by designing and deploying resilient WebSocket pipelines.
- Designed and implemented the core liquidation engine and risk management protocols for the new futures trading system, ensuring platform solvency during high volatility.
- Mentored 2 junior developers, leading to one's promotion to Mid-level within a year and increasing team velocity.

Senior Software Engineer

Apr 2017 - Feb 2023

Medesk - Healthcare SaaS for 3000+ clinics

- As a key engineer during growth from 60 to 3,000+ clinics, led multiple initiatives to scale and modernize the platform's backend.
- Led the migration of the monolithic C# billing system to Go microservices, improving system maintainability and enabling faster feature delivery.
- Cut infrastructure costs by \$10k/month (~\$120k annually) by redesigning the data layer and migrating from Neo4j/Elasticsearch to a single PostgreSQL instance.
- Built a full-stack business analytics module (Go, TypeScript) that was a key driver in surpassing the 1,000-clinic customer milestone.
- Launched a WebRTC-based telemedicine service in under 3 months in response to the COVID-19 pandemic, allowing 1000s of clinics to maintain patient care.
- Automated integrations with 8+ external laboratory APIs (FTP/XML), reliably processing millions of patient lab results and reducing manual data entry.

Software Engineer

Sep 2015 - Mar 2017

Newmax Technologies

- Refactored a critical Go microservice for real-time ride dispatching, eliminating production crashes and achieving service stability.
- Reduced average client wait time from 5 minutes to <30 seconds by re-architecting the matching algorithm to handle parallel requests.

LANGUAGES

English - C1

Russian - Native

EDUCATION

Bachelor of Computer Software Engineering

2012 - 2016

Tashkent University of Information Technologies
